The annual interest rate caps for new policies are guaranteed for one year from the date the policy is issued. On each policy anniversary, the company will declare new annual interest rate caps that will apply for the next policy year. During the first seven years, the cap will never be lower than 3.50% as shown above. After the seven-year term expires, the cap is guaranteed to always be at least 3.00% for the life of the policy as shown above. The interest rate cap places a maximum limit on the amount of index growth, if any, credited to the policy each year, regardless of the performance of the stock-price index.

** The premium bonus is an amount equal to a percentage of your premium and is immediately added to your annuity value on the policy date. The premium bonus is considered earnings and is not included in the calculation of the return-of-premium guarantee or the allowed first-year withdrawal amount.

The product and premium bonus are not yet available in NY and OR.
